

SCREEN  
PLUS

*Japanese Translucent*

Furthering their reputation for innovative and trend setting creation the design team has developed the translucent screen. This free standing screen is a development of the traditional Japanese Shoji screen. The new translucent screens have light defusing cores. These provide a range of diffusion.

Alternatively, fabrics, wallpapers or other suitable cores can be substituted to co ordinate with specific decors.

The core is supported within the frame. This construction enables the translucent screen to be mounted on free standing feet or to use the post joining system or to be supported from overhead fixtures.

While the translucent screen was created for business areas it has been used equally effectively in a wide variety of applications.

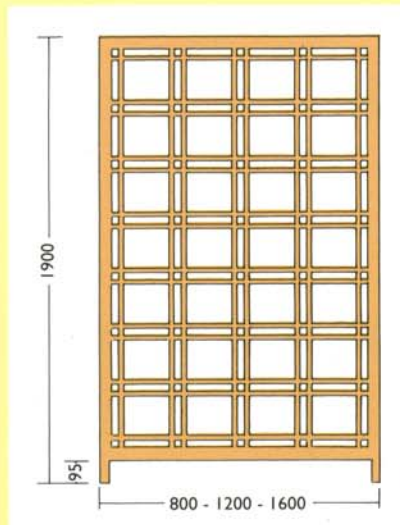

#### CHOICES OF INSERT

Standard diffuser white (26% block) or smoked brown (10% block).

SCREENS CAN BE SUPPLIED WITHOUT AN INSERT FOR YOU TO FIT YOUR OWN FABRIC, WALLPAPER OR OTHER INSERT. OF YOUR CHOICE.

### LEVAN

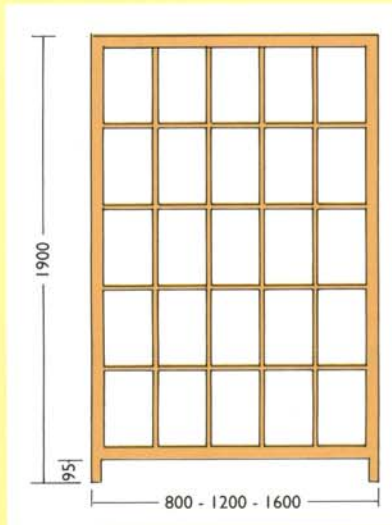

FRAME: 45mm face x 34mm deep
